

REEF BLOCKS

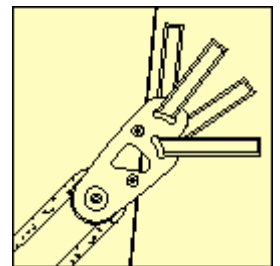

The blocks are connected to the leech of the mainsail with webbing, and reduce point loading on the mainsail when reefing. The small diameter sheaves are suitable to very high loads.

The centre hole can be used as a safety connection to the boom when reefed.

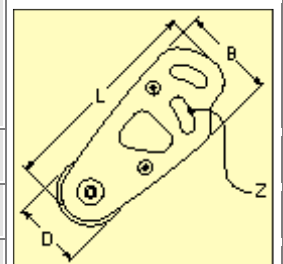

The small version (D=60 mm) is for boats to 60 ft, medium (D=70 mm) for boats 75 ft and larger (D=100 mm) for boats to 90 ft.

D = 60-70-100 mm

MODEL	Ø LINE mm	D mm	L mm	B mm	Z mm	W kg	R kg	WEIGHT kg

WORKING LOAD BREAKING STRENGTH

REEF BLOCKS

If a larger sheave is required and if higher weight and larger sizes are acceptable, then **clew blocks** can be considered.
